*Monochromatic on – axis PSF in log irradiance,
normalized to the peak irradiance value.*

Monochromatic on – axis PSF azimuthally averaged over angular separations $0.1\text{--}33.9 \lambda/D$, normalized to the peak irradiance. The vertical, solid black line at separation $2.252 \lambda/D$ marks the radius of the FPM occulting spot. The vertical, red lines at 5.0 and $20.0 \lambda/D$ respectively indicate the radii of the inner and outermost constraints applied during the apodizer optimization.

Average monochromatic normalized irradiance
within 1 pixels of Lyot stop misalignment.
