

Figure 1: *Monochromatic on – axis PSF in log irradiance, normalized to the peak irradiance value.*

Monochromatic Normalized Irradiance (Radial Average)

Figure 2: Monochromatic on – axis PSF azimuthally averaged over angular separations $0.1\text{--}37.3 \lambda_0/D$, normalized to the peak irradiance. The vertical, solid black line at separation $3.476449131 \lambda_0/D$ marks the radius of the FPM occulting spot. The vertical, redlines at 3.0 and $22.0 \lambda_0/D$ respectively indicate the radii of the inner and outermost constraints applied during the apodizer optimization.
